Are the chinese amateur hand
held radios great? or just
gloryfied to be made out to
sound as good as the leaders
of top notch names such as
kenwood/yaesu/icom? What do
you think? Please leave ure
experiences and comments of
both the top names and the
chinese versions here.

Steve,
I haven't had a chance to play with one of them yet. I just ordered a Puxing 888 off of Ebay. I can't wait to get it and see if it's just hype or actually a good radio. It should be here any day now.

Hi,
Great idea for a group! I am eager to try out my Puxing 777 and see how it stacks up against the units I have had in the past icom/kenwood/yaesu.
The price of course certainly is right on these radio's. I stayed away from ebay because of the add-on costs.
Asia Radio Sales is whom I bought the Puxing from. They ship world-wide for free! Amazing eh?

Take care,
Sean

I have had the radio just a few days but all I can say is wow. The radio is very lite, the recieve audio is crisp and clear. I turn the volume up pretty loud without the audio distorting. The only downfall is when you recieve the radio and start talking on it the audio is muffled I drilled a small hole where th mic was located and it solved the problem.

The programming software has been a challenge. It keeps loosing my comport, but I can still make it work fine by restarting my computer. All and all it is a great radio for the money. I mainly use it to scan. I run it on scan all day and after about 12 -15 hours it's time for a charge. I wish Puxing had mobile radios, because if they did I would buy one. Is there any Chinese models out there? Any info would be appreciated.

7. asia radio sales...charger

Yahoo group: Chinesehamradios
Date: 2008-11-27 15:54:37 UTC
From: ve7ayz
Topic: 7 Message: 7

hey,

hopefully as time moves on this forum will grow larger as I am sure it will.
anyhow, just sent off a second email to asia radio sales regarding the wall transformer that was shipped with my new radio. it appears to be the european version with 220 stamped on the unit which unfortunately won't charge my battery. i did write them on a matter a few backs regarding shipping and had a response within a day. now however it seems to be taking more than a few and a second email on what they would like to do about it. maybe they are busy. anyone else had this happen to them?

not a bad little radio though. will write a review on it at a later date after I have had it for awhile.

73,
Sean VE7AYZ/VA7ICW

Frank,

Sounds like maybe something has blown inside the unit possibly a fuse if it has such a thing inside it or a final? You would maybe have to check the schematics and see. Does your radio have a dc plug on it somewhere or does it rely on battery pwr only? If it has a dc plug and can be hooked up to an external source see if that powers up the unit?
How long have you had the radio?

Sean

10. Programming software for FD-150a

Yahoo group: Chinesehamradios
Date: 2008-12-15 18:57:16 UTC
From: EC_Go
Topic: 10 Message: 10

I downloaded the programming software off of the Feidaxin website for programming the FD-150a. I have been able to program 16 channels. The unit has 99 channels. The software (as far as I can tell) only allows for programming up to 16. Am I missing something? Can this program be used to program more than 16 channels?

11. Re: Programming software for FD-150a

To answer my own question:

Yep....make sure the software supports FD-150A. There will be two
possibles in the radio menu. (FD-150 & FD-150A) The software will
adjust accordingly.

12. Wouxun KG699 VOX from PC?

Yahoo group: Chinesehamradios
Date: 2009-02-26 14:12:36 UTC
From: Richard
Topic: 12 Message: 12

Hello,

I'm trying to set up my Wouxun KG699 to operate as a gateway from my PC. I've activated the VoX setting and run a cable from the PC's soundcard to a 2.5mm adapter and into the radios 2.5mm mic socket but I can't get any audio.

Is there a special audio adapter for this radio or are they the same as the Kenwood 2.5mm & 3.5mm plugs?

Any help would be much appreciated.
Richard

Hi there. Am interested in members recommendations on the various chinese brands available. I only have experience of Feidaxin FD-160A & FD-460A. Both bought last year. These models appear to be well made for the price, & have proved reliable. Mostly use them mobile with a bnc adaptor & a mini mag mount whip. Had no luck getting the usb lead & programming software to work. Had no problems programming with the serial lead though. Cheers, david

Hi, just joined. I reside in USA. Going next week to take test for my ham ticket.
Due to budget I started looking at lower priced HT's and found the Puxing 777. I started lurking for reviews and look favorable. Was wondering if some could answer a few questions for me?

Anyone using headsets or speaker mics for their 777's? Does this overcome the muffled aubio problem? not sure I want to go taking my unit apart and drilling a hole.

suggestions for external antennas? I saw several antennas for use as handheld on the asiaradio sales web site. I keep reading that the stock antenna on most any HT is minimal performance and wondering if the other antennas would be better for tx/rx if the radio is used as portable outdoors.

A friend gave me a mag mount antenna for the car. It has a SMA connector, will this fit the 777 or will I need an adaptor? I read a few reviews saying the antenna connection on the 777 is backwards from what is normally produced, but photos I have seen look to be the same as other HT's that have a screw in antenna. I prefer BNC and will probably get an adaptor for that too.

About how long will shipping to the US take from asiaradiosales? I want to order from them as many have said that is where they got their's and their prices seem the best (plus free shipping, a pet peeve of mine).

Finally, has anyone in the US ever had problems with receivng their 777? Seen on other forums there seem to be some discrepancy about the 777 and 888 (which I want to get eventually too) being legal to use in the US.

Hope you guys don't mind my long winded first post and looking forward to your answers.

Hi from G6IYD. Best wishes with the ham licence. Seem to be a lot of people very happy with the low-price Chinese handhelds. Personally, I have Feidaxin radios. 2 FD-160A`s (XYL also licenced) + an FD-460A. They have proved very reliable, and once you get the hang of them, easy to use. For reviews on the Puxing HT`s, as well as this group, try Eham.net who have reviews on several Chinese radios. For antenna adaptors & other accessories, try radiogearpro on Ebay. Have used them several times over the past year or so. Very prompt service (They usually mark items as `gift` so no customs duty!) Re the legality, as I understand it, as these HT`s can transmit outside the normal ham bands, they don`t have certification to be sold by dealers in the US. Probably the same here in the UK. There is no problem with buying one from HK, providing we only use them on the frequencies we are licenced for. 73, david

I am Alan from the USA. I run mostly 2 meter (because of the many linked repeaters in my area) and have an ADI and a FDC-160a. Love the FDC, much smaller and with a longer-lasting battery pack than my big clunky ADI AT-201.

Am considering the purchase of a UHF unit, so I can use it at the auto race track (to monitor drivers) and at work (also to monitor happenings). Looking for info on small, inexpensive UHF HT's. Thanks

Alan

Ditto, have had my radio (FD-160a) for only a few days but it is a solid device, small, light, sensitive receiver, get good reports on it's transmission quality. Can't believe how thrifty it is with the battery pack! Charged on Sunday night, used all week, on Friday noticed battery was at about 50% (on the little indicator). Of course, that's mostly monitoring, not keying up very much, but still....

Programming was easy (once I found a good reference chart).

I have the USB programming cable and software, however the software breaks it down into sub-bands (130-150 and 150-170) so I am not sure this will do what I want. I need to program 2-meter ham band (144-148) but also want to program public service and weather (150+) for monitoring purposes only (not transmission). So I just programmed it directly from the 10-key pad and forgot the cable.

Bottom line, great rig! 1/2 the size of my ADI HT, more battery capacity, A+ transmissions and great receiver. And for about $56 (including shipping), who could ask for anything more? :)

Dear Alan, bought a couple of FD-160a HT`s for my wife G6ZMK and myself a year or so ago. More than impressed with the performance of such a low price bit of kit. Also bought a FD-460a this year and found it more than adequate to use through the local repeaters. Most useful add-ons I got were BNC antena adaptors and a speaker-mic from 409shop in HK. Found this dealer and radiogearpro give excellent prompt service.
Cheers, david G6ZMK

ADI I got from Texas Towers, FD160 from Radiogearpro.com

One thing I have founds out about the Fd160a which I don't particularly like: while scanning, it will only pause for 5 seconds when it comes to a freq with traffic. Often times you will miss part of the transmission. I contacted the manufacturer, who tells me there's nothing I can do to solve this problem. Wish I knew this in advance, may not have gotten this model :(

The Feidaxin radios may be a bit quirky to use, but I have been using both the 144 & 430mHz versions for over a year and have been very satisfied, considering the budget price. Re FCC regs, the radios may have the capabilty to operate outside the ham bands, but providing you use them within the terms of your licence conditions, what`s the problem? Bit like not allowing sporty cars to be sold as they can exceed the legal speed limit! Cheers, david

Hi
I just orded the above radio from China with some optional accessories
for about $180. Looking forward to test the radio

http://www.wouxun.com/Two-Way-Radio/KG-UVD1.htm
The price is low compared with Japan made Ham radios.
You can find the manual on address.
http://www.wouxun.com/down_01.asp
With this price it is not worth to send the radio for reparing.
If you order from Wouxun you have to correspond vith very nice girls.
I will make a report of the function when I have received the radio.

Hi again
I have got the radio KG-UVD1P with 1750Hz tone as was not in the description of the radio. So far I'm very pleased with the radio. Operation of all menus is from the beginning strange but after a while I have been used to the menus. The sound is very good and the FM receiver has a very good and sharp IF so with the small antenna it is working as a car radio on the FM band. The mechanics are also very robust. I have changed the Li Battery to 1700 mAh. The antenna is connected with en reversed SMA contact. (The hot connection is as mail in the antenna) Adapter to BNC $2 so buy that one too.

Hi
I have been testing the radio now and the following faults are detected:
3 bubble keys has to be pressed extra to make contact.
Squelch splatter interrupting FM radio.
Power connection of the charging unit are blocking the receiver by the switching power supply. External 12 V transformtor does not block the receivers. No indication which band is receiving the a carrier.
Otherwise I'm satesfied with the radio.

I've had my KG-UVD1P for over a month now. I thought the same thing about it as you do about your radio. Now after two drops from shirt pocket height to concrete and no damage (just some scuffed up plastic), I'll never buy one of the others again. For the money, ease of use, ability to program via computer, and the price asked, it's China for me.

37. Re: Max Dual Band Radio?

Yahoo group: Chinesehamradios
Date: 2010-02-03 05:33:28 UTC
From: gerfmon
Topic: 34 Message: 37

Hi, I purchased one of the Max radios from a dealer on Ebay. So far I've been pretty happy with it, at least for 79 dollars U.S. It's housed in a high impact plastic case and has a very solid feel to it. In fact, the radio size and style reminds me a lot of the Yaesu FT-60.

Sensitivity is good and so far I haven't heard any intermod. I haven't put it on a wattmeter yet so no idea if output power is up to spec. Like many Chinese radios transmit audio is a bit muddy with the highs and lows cut out. With a speaker mic I'm told the audio is quite good.

The DTMF tones are very short bursts. I don't do IRLP so I don't know if they'll work for that application. They DO work for remote controlling my Kenwood TM-V71A, which I use at home for a cross link repeater.

As I expected, the radio does not do dual receive. It does dual watch, scanning very quickly between the two displayed VFO frequencies. It does have the quirk of the transmit VFO always switching to the last received VFO when using dual watch.

The manual is typical, very hard to understand after the Chinese to English conversion. I was able to figure out most of the buttons and menu items by playing with the radio for a couple of hours.

A sticker in the battery compartment says the radio was manufactured by Xiamen Electronics, a Chinese manufacturer of radios for many of the "big" names, like Puxing and Wouxun.

I've done extensive searches for this radio on the internet and have found very little info. I have no idea if programming software exists.

BTW, the seller claims features that don't appear to exist on the radio. There is no LED flashlight, and the radio doesn't have voice prompts for the keys and low battery.

All-in-all, a good little dual band radio for very little money!

73,
Jerry Sharp, KD0GS

Topic: 40 Message: 40

Since many of those chinese radios have a builtin scrambler, I wonder which of them are compatible?!

Maybe someone who owns different brands/models did some tests and can post his results here? Would be a great help to know what radios are compatible when sourcing different brands...

Hi. I don't often drop into this group. Have 2 FDC-160A & a FDC-460A. I downloaded the software from Feidaxin but to be honest, didn't find it that easy to use. Programming by hand is simple when you get the hang of it. Have had my radios for a couple of years or so, and have been very pleased with them. Hope you get good use out of yours as well.

First accessory I bought was a speaker-mic from radiogearpro on ebay. If you havn't invested in one yet, they are well worth buying. Cheers, david

Hi. I have 2 FD-160A & a FD-460A. Giving excellent service, sturdy & very good value for money. Setting up is a bit awkward, but the supplied booklet does give you enough info if you read it through a couple of times and experiment. Dont worry if you get it wrong as these radios are quite forgiving.
Frequency range on my FD-460A is 400-470MHZ
Got mine off ebay from radiogearpro.

Hi,
I ended up buying an FD-460A a few weeks ago. It cost me about A$50 delivered from Hong Kong and is a great performer for the money.
It states 400-470MHz on the back of the set but I can enter frequencies up to 479.999 MHz which lets me access the 477MHz CB band.

63. H-777 Radio 400mhz-470mhz

Yahoo group: Chinesehamradios

From: phoenix_wolf_ca
Topic: 63 Message: 63

I required 2 of these radios off of ebay and got the program cable with the one but no software was with it and the seller doesn't answer me on it. Does anyone have one of these radios and what programing software do you use. I read to use BF-480, I tried this but keep getting communication error will not connect to computer. Does anyone have this working and what are the com port setting (baud rate etc.) . I like the radios but like to reprogram the frequencies to different ones that came with the radio.

64. First Post, several questions.

Hello,

I've just purchased a bit of stuff from Hong Kong, a programming cable for the Yaesu FT-7800 and VX-3. A Puxing D03 cell phone + U/VHF radio and a Beufung UV-3.

As suspected the UV-3 is similar to the VX-3 but i believe the programming cables are different. Anyone have any experience of that?

My main problem is the PX-D03. I purchased the programming cable with it. I seem to have an issue with the software. When i try to install it on a Windows XP or 7 machine it reports multiple files (or dependancies) are missing. Win 98 doesn't report any issues but once the missing files are in place the software loads and most of where the tool bar/menu writing and prompt boxes are I get question marks.

The Win XP and 98 are Virtual machines put in place when Windows 7 refused to work with the chinese copy of the Prolific serial to USB chips in any cable. The FT7800/VX3 software works on the XP and 98 machines and communicates with no issues.

Has anyone else had any issues with the D03 software (Ver1.4) for the PX-D03. I've tried both the supplied software and the puxing sites download.

Heres hoping.

Dave

Hi,

I have had problems downloading or opening some pages unless IM using Explorer. Like downloading some files I find can only be done with Explorer.

Good Luck,
73

Ok folks that have this radio also. The BF-480 works fine and the USB cable that I had was no good. Ordered a Kenwood Com Port cable and worked fine. Got a replacement cable from the seller of the h-777 and now it works fine also so problem was a bad usb cable.

Hi guys. I have been out of the loop for a while, but hope to spend more time playing radio this year. Have been tempted to buy other Chinese radios, but am still VERY happy with Feidaxin HT`s. Have just ordered a few extra accessories as tend to use my FD-160A/460A mobile.
Cheers, David G6IYD

I have a couple 777 radios that I think have been cloned to an older model and will no longer open up when they are supposed to.....I have checked DTSS and ctss to make sure the tone is set to none.....anyone have any Ideas on how to make these work again ?

Thanks
Dave

74. UNIER V6 and U18 software wanted

Yahoo group: Chinesehamradios
Date: 2017-06-25 19:58:03 UTC
From: g4wwk@...
Topic: 74 Message: 74

Hi, I have a UNIER V6 and a U18 handhelds
Both are 400 - 470MHz 5 watt, the V6 is 16 channel,and the smaller U18 seems to be 24 channel.

They feel like HYT (Hytera) radios giving the typical HYT de-da bleep on unprogrammed channels,
and they use the FDC / HYT 2pin programming / speaker socket, but don't match any of the HYT HH's.

I presume they are rebadged something else, as i can't find a UNIER website

Any help on finding programming software would be appreciated

Thanks Steve G4WWK

That's them, but (Shenzhen Mingxun) https://www.aliexpress.com/store/723968?spm=2114.10010108.100005.1.UDTyui doesn't reply to my emails

Does anyone recognise them from those pics rebadged as something else?

Thanks Steve G4WWK

Topic: 73 Message: 79

I think that if you unintentionally hold some combination of button while switching it in, possibly including the * button, it goes into "channels only" mode.

The reset procedure by pressing buttons has never solved this problem for me, nobody else has reported it working for them.

The only known way to get VFO mode to work again is to connect the radio to a PC with a kenwood-compatible programming lead and use the puxing 6in1 software to turn off the lock option.
